It assumes that you have some familiarity with Alteon configuration tasks, such as using the Web OS administration tools and attaching hardware to the ...

Configuring Alteon TM Hardware with Clusters
virtual server load balancing: Classic load balancing. Requests destined for a virtual server IP address (VIP), which is owned by Alteon, are load balanced to a real server contained in the group associated with the VIP. Network address translation is done back and forth, by Alteon, as requests come and go. Frames come to Alteon destined for the VIP.

Alteon Glossary - Radware
Binding Types. Immediate binding (layer4 decision based on syn packet only) - The decision to which real server to send the TCP request to is made upon arrival of the TCP SYN packet.. Delayed binding /Force Proxy Mode:. 1. The decision about which real server to send the request to is made after the TCP 3-way handshake is completed by the switch.
