Endoscopy in Annapolis, MD

Diagnostic Endoscopy for Head and Neck Cancer Head and neck cancers often arise in areas which cannot be easily visualized or examined by touch. Evaluating these tumors requires clinicians to perform a flexible fiberoptic or rigid endoscopic exam. This consists of inserting a sterile endoscope through the nose or mouth to visualize the tumor.

Endoscopy

Results All centres contributed. Two centres retained routine endoscopy, with three unable to perform even urgent IBD endoscopy. 122 patients were diagnosed with IBD, and 53.3% (n=65) were presumed diagnoses and had not undergone endoscopy with histological confirmation. The most common induction was exclusive enteral nutrition (44.6%).
