In Vitro Fertilization
(IVF) For some fertility problems, your healthcare provider may recommend in vitro fertilization. During IVF, sperm and egg are combined outside the body in a lab. A fertilized egg (embryo) is then placed in the uterus to grow. In most cases, IVF is done using hormone medicines to increase the chances of success.
In Vitro Fertilization (IVF)

The fertilized egg (embryo) is transferred into the uterus (C). In vitro fertilization (IVF) is a complex series of procedures used to help with fertility or prevent genetic problems and assist with the conception of a child. During IVF, mature eggs are collected (retrieved) from ovaries and fertilized by sperm in a
In vitro fertilization (IVF) is the joining of a woman's egg and a man's sperm in a laboratory dish. In vitro means outside the body. Fertilization means the sperm has attached to and entered the egg.
