Whether Python or R is more superior for Data Science / Machine Learning is an open debate. Despite o f its quiriness and not-so-true-but-generally-perceived slowness, R really shines in exploratory data analysis (EDA), in terms of data wrangling, visualizations, dashboards, myriad choices of statistical packages (and bugs) — so I always found it helpful to dual wield R and Python ...

PHREEQC defines solutions by the number of moles of each element in the solution. To convert from mg/L to moles of element in the representative volume of a reaction cell, mg/L is converted to mol/L and multiplied by the solution volume, which is the product of porosity (SetPorosity), saturation (SetSaturation), and representative volume ...
