This distance learning portal contains up-to-date study material for the state-of-the-art in Pulmonology.

ERS - Paediatric Respiratory Diseases
In general, pediatric airways are smaller, less rigid, and more prone to obstruction. Children also have higher respiratory rates than adults making them more susceptible to agents in the air. The anatomy of a child's lungs and other components of the pulmonary (respiratory) system make treating pediatric lung disease a very specialized practice.

Anatomy of a Child's Lung - Pediatric Pulmonologists
It is one of the most important complications of prematurity, with a reported incidence of 23% of infants born at 28 weeks, increasing to 73% of infants born at 23 weeks. It is characterised by prolonged respiratory support, compromised lung function and recurrent respiratory infections during the first year of life.

Paediatric respiratory diseases - ERS
Pediatric Airway. Airway Resistance. Full Term Newborn Airway. 1mm of edema, the diameter will be 44% of normal. Adult Airway. 1mm of edema, the diameter will be 81% of normal. Poiseuille's law. If radius is halved, resistance increases 16fold. Resistance increases 3x in an adult and 16x in an infant.

Respiratory Management in Pediatrics
The field of paediatric respiratory medicine has continued to develop at a very rapid pace. Like previous years, we have assembled a programme to cover important topics ranging from specialised advances in the field such as cilopathy and techniques in assessing small airway disease to the practicalities of more common conditions such as asthma.
