BIODIVERSITY AND CONSERVATION Although India has only 2.4 per cent of the world's land area, its share of the global species diversity is an impressive 8.1 per cent. That is what makes our country one of the 12 mega diversity countries of the world. Nearly 45,000 species of plants and twice as many of animals have been recorded from India.

BIODIVERSITY AND CONSERVATION - Prashanth Ellina

CONSERVATION OF BIODIVERSITY: INSITU AND EX-SITU In-situ conservation: Conservation of a species is best done by protecting its habitat along with all the other species that live in it in nature. Ex-situ conservation: However, there are situations in which an endangered species is so close to extinction that unless alternate methods are instituted, the species may be rapidly driven to extinction.

Biodiversity and its Conservation - LinkedIn SlideShare

This two-volume book project focuses on the dynamic biodiversity of Central Asia with in-depth analysis on phytosociology, plants, animals and agroecology. There are also chapters that explore new applications and approaches to overcome problems associated with climate change.

Biodiversity and its conservation: an overview (Ecology)

Biodiversity refers to variation within the living world, while genetic diversity represents the heritable variation within and between populations of organisms, and in the context of this paper, among plant species. This pool of genetic variation within an inter-mating population is the basis for selection as well as for plant improvement. Thus, conservation of this plant genetic diversity is ...

Genetic diversity and conservation and utilization of ...

At least 18 biodiversity shelters were documented across onshore operating sites, and the collection of plant and animal life under the company's protection encompasses an area of over 1,200 km². Eight areas have been formally designated "Saudi Aramco Biodiversity Protection Areas," and these total 900 km².

Oil and gas operations coexist with environmental ...

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Biodiversity - Wikipedia

Biodiversity is the variety of different forms of life on earth, including the different plants, animals, micro-organisms, the genes they contain and the ecosystem they form.

(PDF) Biodiversity: Concept, Threats and Conservation

Importance of Conservation of Biodiversity. Humans derive a number of economic benefits from nature like food, firewood, fibres, medicines and more. More than 25% of the drugs are derived from plants and more than 25,000 species of plants are used by natives for medicine.

Conservation of Biodiversity: Introduction, Types ...

Biodiversity and its Conservation 1. INTRODUCTION: Biodiversity is the variety of life on earth It includes all life forms-from the unicellular fungi, protozoa and bacteria to complex multicellular organisms such as plants, birds, fishes and animals. Biodiversity is the variety of flora and fauna on this planet earth.
