fount that the acupuncture system is in close functional interaction with both central nervous system and endocrine system, as well as with peripheral and autonomous nervous systems [1-3]. The final reason was a lack of clear anatomical basis of the Chinese acupuncture system: however, new investigations of specific intercell channels

### BIOPHYSICAL BASES OF THE ACUPUNCTURE

Objective: The aim of this review is to present some of the recent findings that point to underlying mechanisms of acupuncture. Methods: Implications are discussed, both in terms of the scientific basis for acupuncture effects and the continued need to rely upon classical concepts in the clinical setting. Current areas of interest in acupuncture research include: anatomy/histology, physiology, biochemistry, molecular biology and physical properties of points and channels.

Imoto's work illustrates the ability of water to record vibrational and energetic information, while Dr. Shui Yin Lo (The Biophysics Basis for Acupuncture and Health) hypothesizes that both meridians and acupuncture points are made up of "water clusters." [A] "water cluster is defined as approximately 10 9 water molecules combining to form a 'cluster' that is a dipole, i.e., negatively charged on one end and positively charged on the other. When these clusters are stimulated by ...

REVIEW OF "THE BIOPHYSICS BASIS FOR ACUPUNCTURE AND HEALTH," by Dr. Shin Yin Lo. As a layman am not qualified to report on portions of this book, as it contains countless formulas and lab reports to back up the text, which will be helpful for technical readers. The other portions were most readable, and made it a great discovery for me.
